Wireless System

NATIONWIDE SERVICE & SUPPORT IN:

- Site Survey
- Data/Network Cabling
- Wireless System Installation
- WIFI Hotspot
- Router
- Switch

Managing network threats is a growing issue for network managers dealing with Enterprise grade Local Area Networks. Confidential corporate data is placed at risk owing to potential WIFI intrusions and exposure of that data.

Security solutions need to detect intrusion via WIFI Access Points while providing monitoring tools that can instantly detect and alert management when unauthorized access or attacks occur on your network.

As a Motorola authorized reseller Kalex provides the systems needed to manage and prevent rogue intrusion along with the building mapping tools needed to determine the optimized placement of Access Points required to provide reliable network access.

Our process is simple and straight forward. We perform a building signal strength requirement analysis determining where Access Points should be placed in order to maximize signals while detecting and preventing outside intrusions. Once the wireless installation is completed we perform an exit survey showing that the detection and intrusion system is doing the job.
